Information Disclosure Statement

The information disclosure statement (IDS) filed on 11/13/2003 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement has been considered by the examiner.

EXAMINER'S AMENDMENT

The application has been amended as follows:

Specification – Page 2, line 30, the last two words “hypercompressor, a in” have been changed as - hypercompressor, in a -

It appeared to be a typing error in the text and hence has been corrected.

NOTE – The term “pressure-wrapped cylinder” is being interpreted as cylinder for examination purposes as the applicant has not indicated any other meaning for the term.

Allowable Subject Matter

Claims 1 – 20 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art neither discloses nor makes obvious the combination set forth in the claims by not disclosing a pressure sensor that is designed to correlate the strain inside the reciprocating compressor to the plunger position and thereby generating a pressure profile based on the measured strain. The plunger is designed to compress the working fluid and thereby

Art Unit: 3746

increase the fluid pressure. McManus et al discloses a pressure monitoring assembly but the strain responsive sensor is disposed outside the exterior wall surface of the vessel. There are also teachings in other prior art of torque and position transducers as Robert (US Patent number 5,931,044), that teaches mountable strain gauge.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art did not make the combination set forth in the present invention obvious and is therefore considered a novel invention. The following references are cited to further show the state of the art with respect to sensing devices.
